Creating a Dedicated Discord Account

To limit the complexity and to not have to deal with mapping and capturing several audio devices, I chose to create a new Discord account that is solely used for running TranscriptOMatic. This is necessary because one account can't be joining a voice session from two devices or clients.

Apart from using a good password, consider using 2FA to secure the account.

> People will sometimes see this secondary account as a bot.
> It is not.
>
> A bot offers functions that (most of the time) can be triggered in Discord or automatically without direct interaction by the owner of the bot.
> In contrast, your dedicated second account has to be operated by a human - yourself - via a Discord client.
