

# Creating a Dedicated Discord Account

To limit the complexity and to not have to deal with mapping and capturing several audio devices, I chose to create a new Discord account that is solely used for running TranscriptOMatic. This is necessary because one account can't be joining a voice session from two devices or clients.

Apart from using a good password, consider using 2FA to secure the account.

A screenshot of the Discord account creation form in a browser window titled "Discord - Legcord". The form is set against a dark blue background with a starry pattern. It includes the following fields: "E-Mail" (with a red asterisk), "Anzeigename" (display name) with the value "TranscriptOMatic", "Benutzername" (username) (with a red asterisk), "Passwort" (password) (with a red asterisk), and "Geburtsdatum" (birth date) (with a red asterisk) consisting of "Tag", "Monat", and "Jahr" dropdown menus. A checkbox is checked, with the text "Ich habe die Nutzungsbedingungen und die Datenschutzerklärung von Discord gelesen und akzeptiert." Below the form is a blue button labeled "Account erstellen".

People will sometimes see this secondary account as a bot.  
It is not.

A bot offers functions that (most of the time) can be triggered in Discord or automatically without direct interaction by the owner of the bot.  
In contrast, your dedicated second account has to be operated by a human - yourself - via a Discord client.
