# Installing Pi-Apps

To install the Pi-Apps app store for Raspberry Pi, follow the instructions on their website:

```
wget -qO- https://raw.githubusercontent.com/Botspot/pi-apps/master/install | bash
```

> Check the URL before running — piping directly to bash executes code without review.

The installed app store will reside in your home directory:

```
$HOME/pi-apps
```

Apps installed via Pi-Apps usually can be found in `/opt`. Keep in mind that `/opt` might be missing from the shell's `PATH`.
